

DESIGNMERGE®

Variable Data Software for QuarkXPress® & Adobe® InDesign®

Benefits of MPS Training

- Creates an environment for learning that is separate from production
- **Our** experts will shorten the learning curve for **your** experts
- Decrease downtime
- Formal instruction takes the guess-work out of production
- Instructor provides insight from years of VDP experience
- Choose a package that fits your budget and needs
- Take the stress out of your first VDP job (Package 2)
- It's easy!

**For all training packages, actual "delivery" (time and content) may vary to accommodate the knowledge-level, capabilities, and interests of the trainee. Please note that Meadows Publishing Solutions is not responsible for any issues that arise during training related to the client's data, network, output device, workstations, or software that is not provided by Meadows.*

DesignMerge® Training Packages

Professional software training and services

Package 1 — Web-based Training

One-on-one training! A DesignMerge® expert leads an online training session that covers common features while offering insights and tips for the selected output driver. The trainee actually "drives" the software while the instructor guides the process (the online meeting software provides this capability). A single trainee receives the focus of the training, thereby creating an "in-house DesignMerge expert." The training is based on the tutorials that are included in the DesignMerge software package.*

Package 2 — Web-based Training + 1st Job Setup

Building on Package 1, Package 2 adds a measure of confidence for the client's first application of the DesignMerge software. Following initial training (as described in Package 1), the client provides Meadows Publishing Solutions all of the elements for a variable data printing job. (These files can be uploaded to the Meadows FTP site.) Within a minimum of two business days of receiving the required files, Meadows will return the document, linked and processed by DesignMerge, along with the DesignMerge DDF (Database Definition) for the database file and a PDF proof of 25 merged data records. The final merge will be executed by the client. Additionally, a DesignMerge expert will schedule a second online training session based upon this job. The scope of training is defined by the job, with a maximum online instruction time of two hours.*

Package 3 — One Day On-site Installation & Training

Instruction is held on-site at the client's premises with particular emphasis on integrating DesignMerge into the client's production workflow. A DesignMerge expert leads a training session that covers all available features while offering insights and tips for the selected output driver. This training has been designed to create one or two "in-house DesignMerge experts." The training is based on the DesignMerge tutorials and manuals, with a maximum instruction time of eight hours. Time remaining past the standard training can be dedicated to customer job preparation and related questions.* Travel and expenses are billed separately.

Additional days on-site available at a discounted rate.

Package 5 — Web-based Refresher Course

For clients who have been previously trained, a DesignMerge expert leads an online training session that reviews common features while offering Q&A, insights and tips according to the client's interests. The training is based on the DesignMerge tutorials, with a maximum online instruction time of one hour.*
